leek bundling machines

Product description

This machine joins leek, celery, rhubarb or any possible vegetable quickly by placing adhesive tape around the bundle automatically.

The well-considered construction, made in accordance with your wishes by our AVS-team, is very progressive.

Our trumps

High capacity

It is possible to join up to 1500 bundles per hour.
The standard large supporting table comes with 4 or 6 filling bins.

Easily adjustable

The machine is operated by 3 re-adjustable frequency steering which are connected with a PLC-steering.
Because of this, the machine can be adjusted very accurately.

Wear-resistant

The chassis, the covering and the drive rolls are manufactured out of stainless steel.
The bin chain rotates on multilane wear out-strips.
Thanks to built-in leek detection, the bin chain rotates at a low speed if there is no leek placed into the bins.
The double stainless steel bin chain is also available in a nickel version.

Maintenance friendly

New option: we can provide the machine with automatic chain greasing (with adjustable grease quantity)

Reliable

Because the tape heads are heated internally (which is adjustable), it is also possible to join wet products.

Safe and low energy consumption

The machine is provided with an emergency stop and fuse, and can be supplied with a protection case with plexidoors.
The machine has a low energy consumption.

Ergonomic

The adjustable height benefits your working comfort when you are handling this machine.
Thanks to the transport wheels (with brakes) the machine can be replaced easily.

Finishing touch

If the adhesive tape roll is finished, the machine stops automatically thanks to the built-in adhesive tape-alarm.
The filling bins are provided with a rubber protection strip.

Total concept

Every machine is thoroughly adjusted and tested by us.

The following things can be delivered with every machine:

- ▶ leafknives
- ▶ conveyor belts
- ▶ leek turntable

We provide maintenance, repairs and service after sales.
We have nearly all spare parts in stock and can deliver all components.
There is the possibility to make adjustments according to your specific demands.
